

1 of 6: FOX

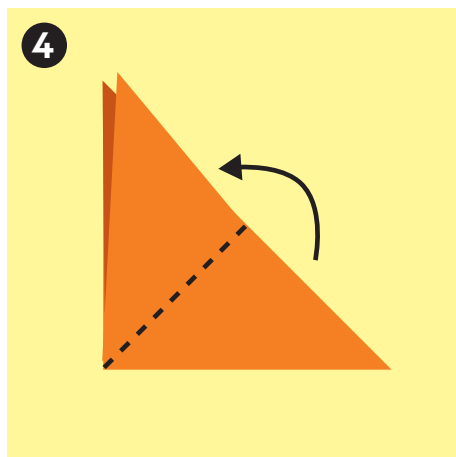

Fold your square of paper in half diagonally to make a triangle.

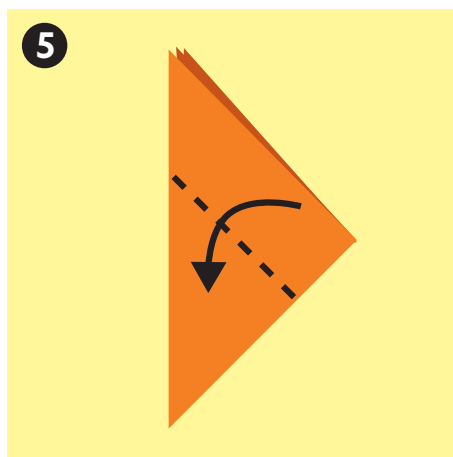

Fold it in half again so that the right-hand corner is on top of the left-hand corner, making a smaller triangle.

Fold the top part up so that the left-hand corner is on top of the upper corner.

Turn the model over, left to right. Fold the bottom-right corner up to the left so it is on top of the upper corner.

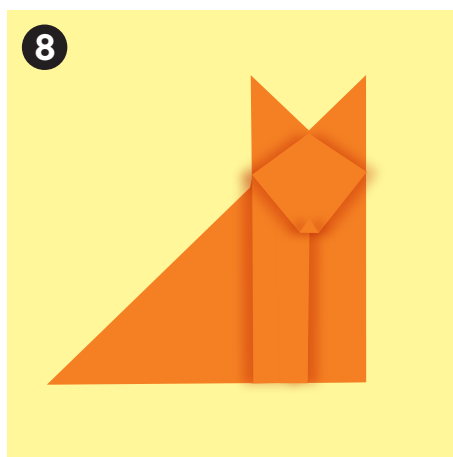

Fold all the layers of paper along the upper-right side, down to the left, making a crease about a third of the way along.

Reach inside the middle of the eight edges (there will be four layers on either side) and open the layers up.

Hold them open with one hand then squash down the top part so it lies flat.

Fold up the tip of the nose, and your fox is finished!
